

ISSA Chapter Meeting

How to Leverage the NSA to
Improve Your IT Asset Disposition

Tuesday, December 1st, 2020

Allan Jenik

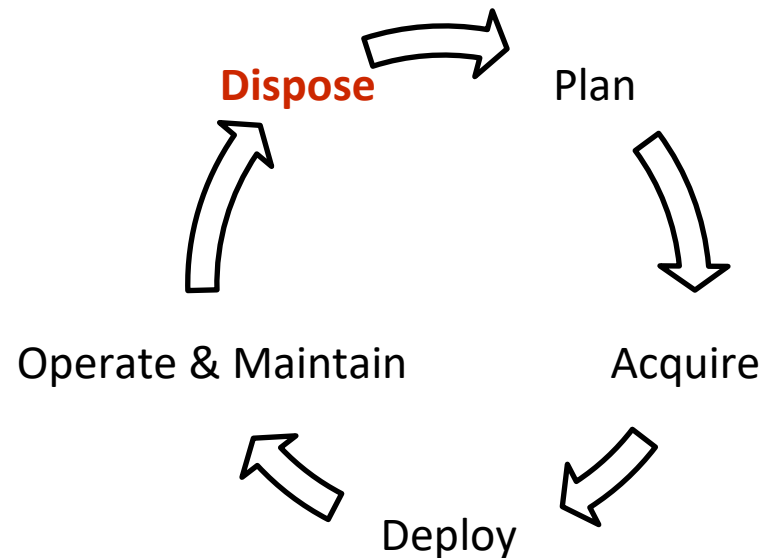

President

ajenik@securis.com | (757) 272-1166

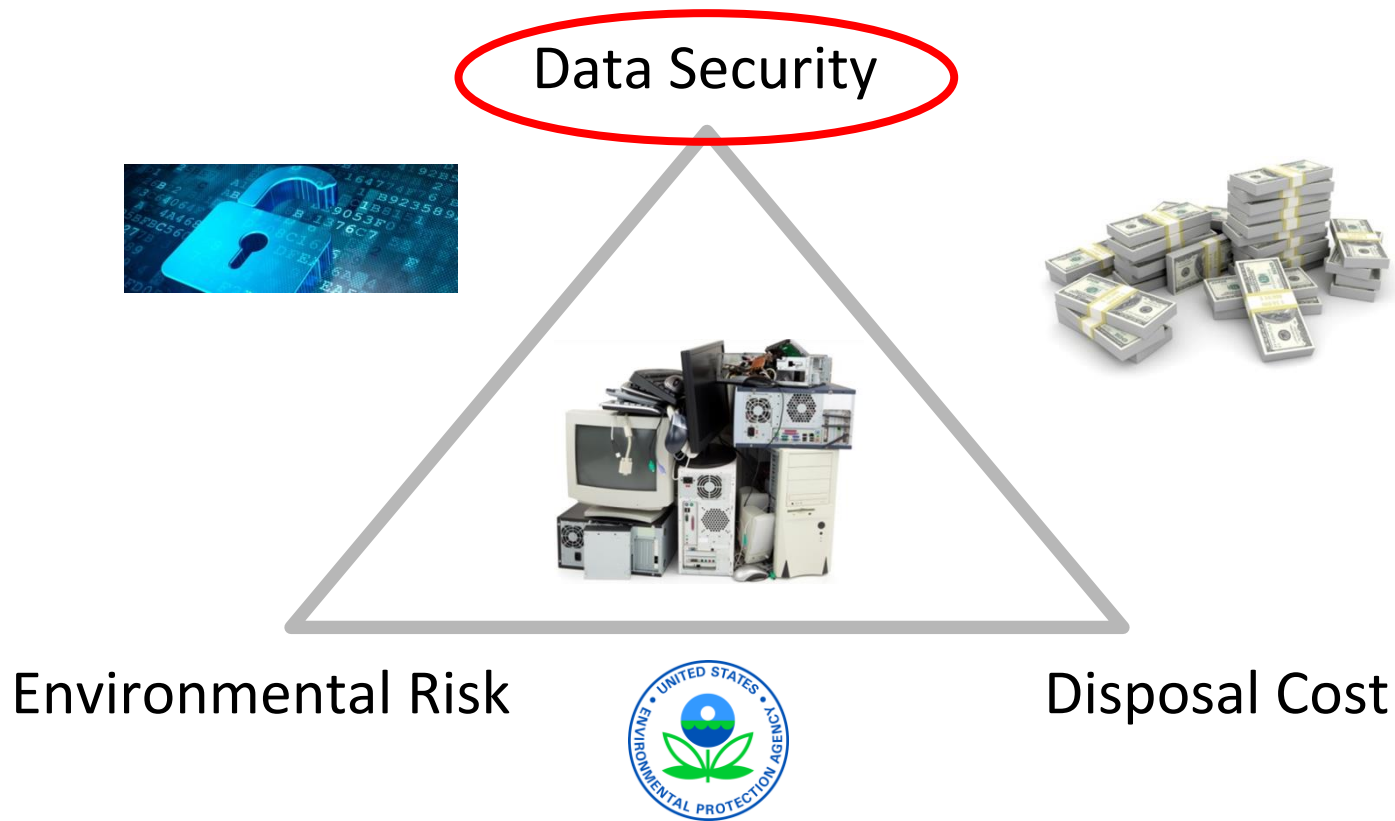

IT Asset Auditing, Recycling & Destruction

Presentation Overview

- The NSA and NIST as a Resource
- Case Study
- Cell Phone Disposal
- Questions
- Tools to Help IT Managers

IT Management Challenge

What is at Stake?

**“Negligent data center shutdowns bring
\$60 million fine for Morgan Stanley”**

The NSA: A Valuable Resource

NSA: Cybersecurity Advisories & Technical Guidance

✈ Airplane mode Bluetooth® Cellular service signal Location Near-field communication (NFC) Recent applications soft key Wi-Fi

Legend: ! Avoid ⏻ Disable ✓ Do ✗ Do Not

BLUETOOTH®
Disable Bluetooth® when you are not using it. Airplane mode does not always disable Bluetooth®.

WI-FI
DO NOT connect to public Wi-Fi networks. Disable Wi-Fi when unneeded. Delete unused Wi-Fi networks.

CONTROL
Maintain physical control of the device. Avoid connecting to unknown removable media.

CASE
Consider using a protective case that drowns the microphone to block room audio (hot-miking attack). Cover the camera when not using.

CONVERSATIONS
DO NOT have sensitive conversations in the vicinity of mobile devices not configured to handle secure voice.

PASSWORDS
Use strong lock-screen pins/passwords: a 6-digit PIN is sufficient if the device wipes itself after 10 incorrect password attempts. Set the device to lock automatically after 5 minutes.

APPLICATIONS
Install a minimal number of applications and only ones from official application stores. Be cautious of the personal data entered into applications. Close applications when not using.

SOFTWARE UPDATES
Update the device software and applications as soon as possible.

BIOMETRICS
Consider using Biometrics (e.g., fingerprint, face) authentication for convenience to protect data of minimal sensitivity.

TEXT MESSAGES
DO NOT have sensitive conversations on personal devices, even if you think the content is generic.

ATTACHMENTS/LINKS
DO NOT open unknown email attachments and links. Even legitimate senders can pass on malicious content accidentally or as a result of being compromised or impersonated by a malicious actor.

TRUSTED ACCESSORIES
Only use original charging cords or charging accessories purchased from a trusted manufacturer. **DO NOT** use public USB charging stations. Never connect personal devices to government computers, whether via physical connection, Wi-Fi, or Bluetooth®.

LOCATION
Disable location services when not needed. **DO NOT** bring the device with you to sensitive locations.

POWER
Power the device off and on weekly.

MODIFY
DO NOT jailbreak or root the device.

POP-UPS
Unexpected pop-ups like this are usually malicious. If one appears, forcibly close all applications (i.e., iPhone®: double tap the Home button® or Android®: click "recent apps" soft key).

NSA: CSDSR

[HOME](#) > [RESOURCES](#) > [MEDIA DESTRUCTION GUIDANCE](#)

Center for Storage Device Sanitization Research

Background

The Center for Storage Device Sanitization Research, CSDSR, guides the sanitization of information system (IS) storage devices. This web page provides resources for a vendor of storage device sanitization, the NSA/CSS Evaluated Products Lists (EPL) PDF, a Search function for the EPL, and contact information for The Center for Storage Device Sanitization Research. Here is a short video (In Development) that explains the responsibilities and duties of the Center for Storage Device Sanitization Research.

Evaluated Products Lists

The NSA/CSS Evaluated Products Lists equipment that meets NSA/CSS specifications. These lists apply to all NSA/CSS elements and pertain to all IS storage devices utilized by NSA/CSS elements, contractors, and personnel.

Policy: For disposal or recycling per NSA/CSS Policy Statement 9-12, "NSA/CSS Storage Device Sanitization" (Reference a). Information stored on these devices may range from UNCLASSIFIED to TOP SECRET and may include compartmented, sensitive, or limited-distribution material.

Evaluated Products List PDF

The CSDSR updates the EPL quarterly.

- [NSA/CSS Storage Device Sanitization Manual](#) Dated 19 December 2017
- [NSA/CSS Evaluated Products List for Hard Disk Destruction Devices](#) Dated September 2020
- [NSA/CSS Evaluated Products List for Magnetic Degaussers](#) Dated September 2020

Case Study:

You have been tasked to manage the secure disposition of the following assets:

- 50 data center servers
- 200 hard drives
- 150 data storage tapes
- 30 Cell Phones

What are the steps you would take to ensure the proper disposition of the equipment?

Case Study:

NSA/CSS Storage Device Sanitization Manual

Certificate of Destruction & Recycling

This Certificate acknowledges the receipt of items for electronics recycling and data destruction services. Securis guarantees that all material was destroyed and recycled by environmentally sound methods and NAID Certified standards. If available, please see the inventory file for more details on each item.

Company: IT Security Company and Data Center

Date of Service: September 9, 2015 10:45 AM

Destruction Type: Shredding and Degaussing

Job Number: VA902887

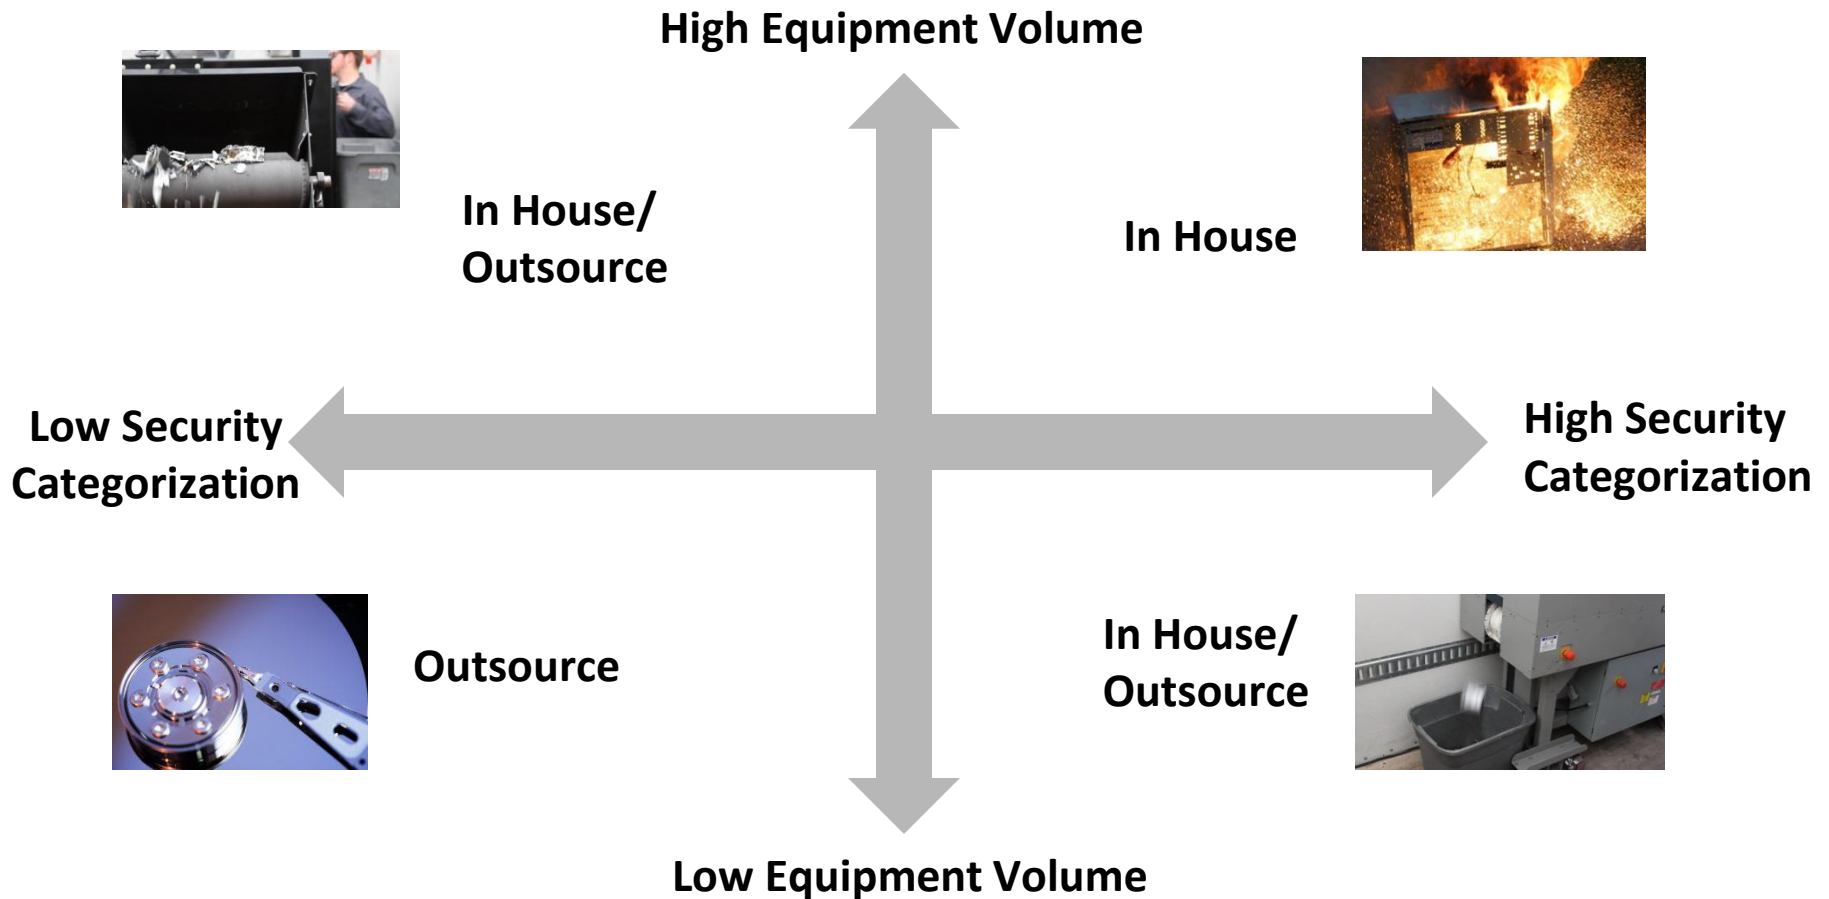

Corporate Officer:

Date: 09/09/2015

14001 Wilbur Road, Suite 800 | Chantilly, VA 20151 | 703-436-1887 | securis.com

Data Security: In House vs. Outsourced

Cell Phone/Tablet Destruction Issues

416,000 cell phones discarded every day in U.S.

Late model phones difficult to recycle/destroy due to battery

NIST Resources

NIST Special Publication 800-124 Revision 2

5.5 Dispose of and/or Reuse Device

- It is essential to activate whole-device encryption before a device is deployed and to perform a “factory reset” operation to cryptographically erase all user data before disposing of a device.
- There are two additional considerations for secure device disposal: assured destruction of the drive encryption key and destruction of user data on removable memory cards (e.g., SIM or Secure Digital [SD])
- A thorough device disposal process includes both a factory reset and removal of any associated cards.

IOT Device Growth

Number of internet of things (IoT) connected devices worldwide in 2018, 2025 and 2030 (in billions)

IOT Edge Computing data storage

Core IoT edge architecture: Five components

1. Complex event processing
2. Machine learning and artificial intelligence models
3. Applications
4. Offline support
5. Data management

IOT Edge Computing Devices

Core IoT edge architecture: Five Examples

1. NGD Systems offers a range of “computational storage” products that look like traditional NVMe SSDs, but that also allow application code to run within the drive.

2. ScaleFlux offers similar technology that can offload common tasks (such as erasure coding, database acceleration) to the storage device.

3. Amazon Web Services (AWS) provides the capability to import edge data into AWS S3 using Snowball. A Snowball appliance is effectively a ruggedised server with storage that can be used to physically transport data from an offsite location. AWS has further extended the capability of Snowball with Snowball Edge, which allows local data processing either with EC2 instances or Lambda functions.

4. Pure Storage, NetApp and DDN have all developed converged infrastructure or hardware reference architectures to use storage to support on-premise ML/AI systems. In these instances, the storage hardware provides the ability to process large volumes of data in parallel at extremely low latency.

5. Microsoft is working on project Brainwave, custom hardware to process data in real time as it is ingested from external sources. This is driving a move towards real-time AI processing.
